

HOOFPEP

HORSEPOWER

Nutritional support with high Biotin level for
**hoof growth, strength
and resilience.**

CONTENTS

Biotin	666.7 mg per kg
Zinc Amino Acid Complex	120g per kg
Zinc Oxide	17g per kg
Methionine	119g per kg
Methyl Sulphonyl Methane	40g per kg
Full Fat Soybean Meal	703.3g per kg

DIRECTIONS FOR USE & FEEDING RATE

The amount to be fed should be mixed well with the normal feed or bran mash.

Use the scoop provided to measure the amount.

FEEDING RATE PER DAY:

30g per day 1 level scoop = 30g

Because Hoofpep can only affect new hoof growth it should be fed for at least 5 months.

Hoofpep users will be able to see the new growth below the coronary band in two weeks.

Horses with excessive growth should have the excess trimmed back.

BENEFITS

Hoof growth is partly dependent on nutritional factors, particularly organic Sulphur from Biotin which has a role in maintaining healthy horn, skin and hair.

Methionine and MSM are additional sources of organic Sulphur.

Zinc facilitates the chemical interactions necessary to form good quality collagen from which horn and hair are made.

Hoofpep provides the nutrients most likely to influence hoof growth and strength in organic and inorganic forms to maximise bio-availability and effect.

Not all horses with poor hooves will respond to nutritional supplements.

PACK SIZES

Available in the following pack sizes:
3 kg, 12 kg Tubs
